VERMONT BOND BANK
INFRASTRUCTURE LOAN DATABASE (BETA)
TECHNICAL NOTES

Released February 5th, 2021

Overview of Infrastructure Loan Database

PURPOSE: Provide Vermonters with understanding of cost, age, and type of publicly financed local capital assets

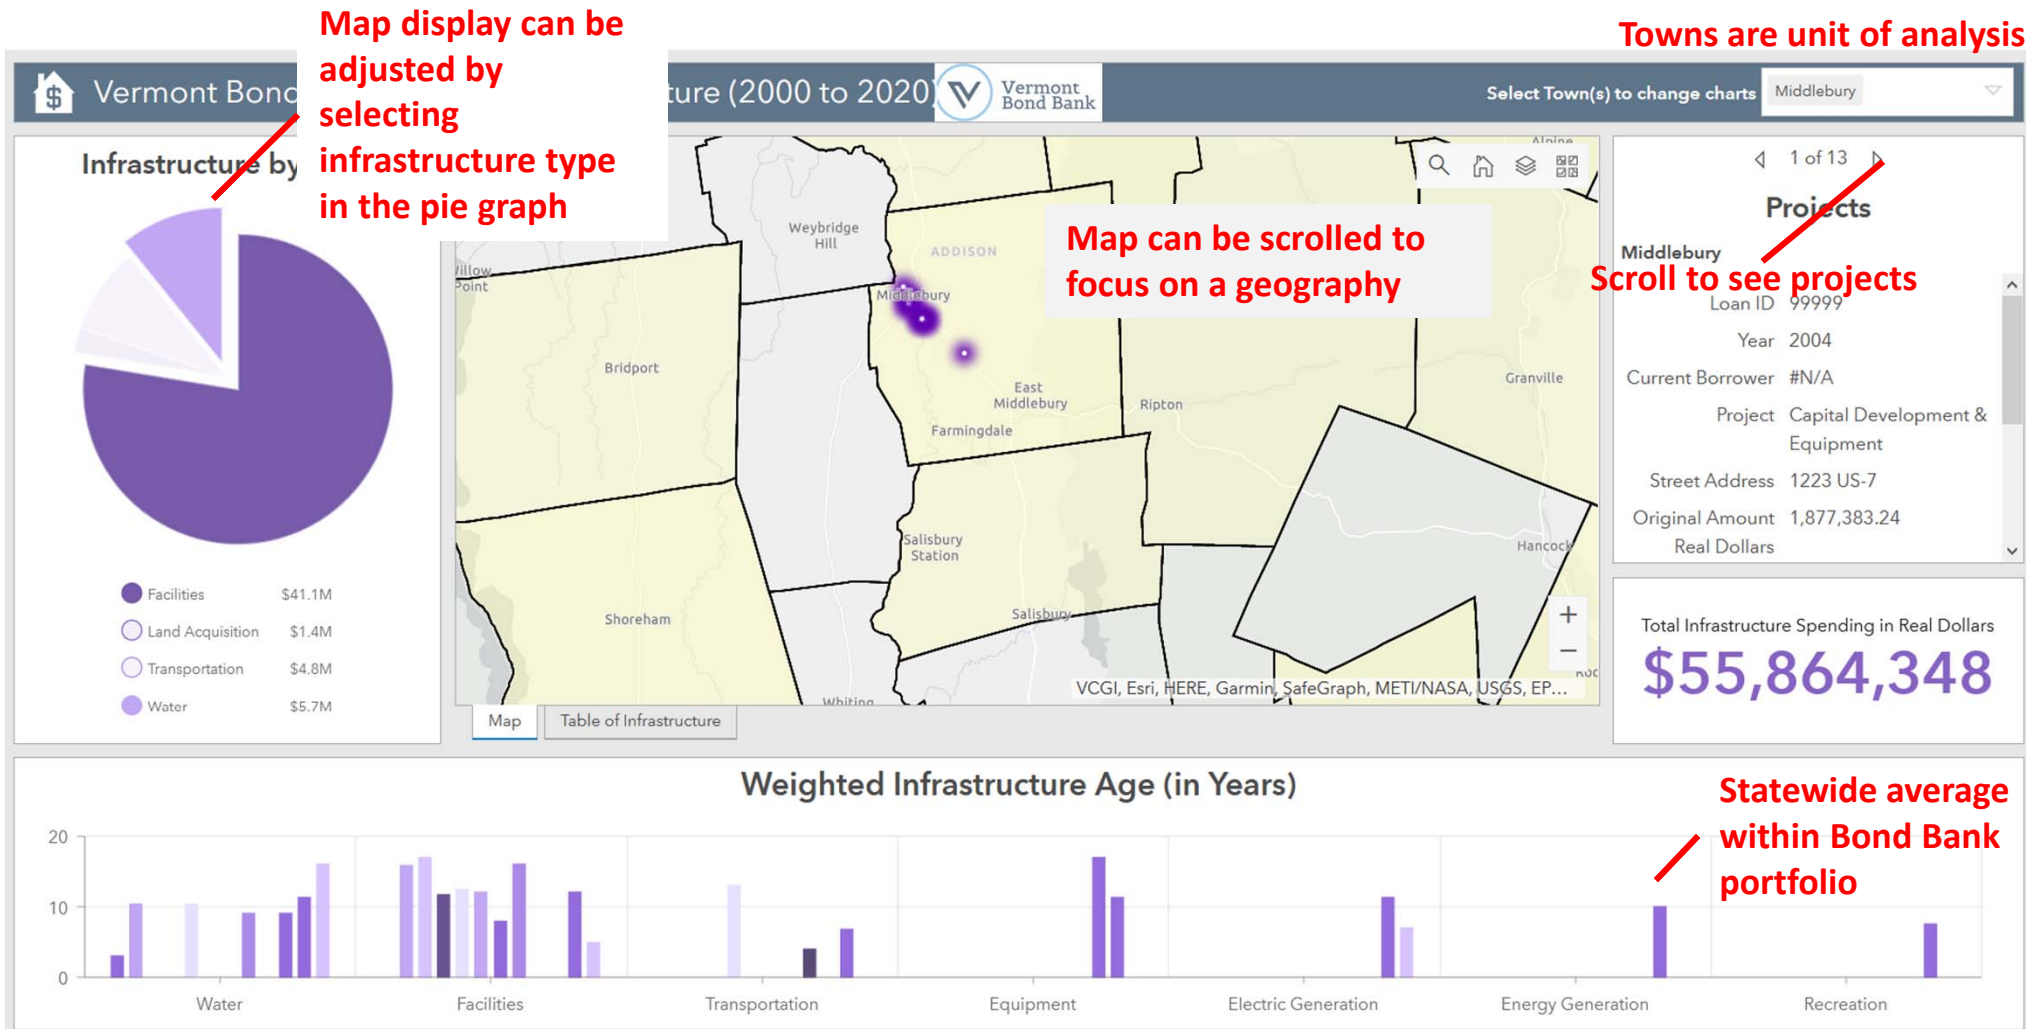

LIMITATION: Data populated by Vermont Bond Bank (“Bond Bank”) loans only (i.e. no grants, USDA, SRF, or private bank loans)

Infrastructure Loan Database Methodology

- Database represents loan portion of project costs only and does not include supplementary sources other than the Bond Bank financed loan
- Geolocation chosen based on either the location of the project (if known) or the municipality's or school district's home office (if project location not known)
- Project descriptions based on loan financing applications (i.e. applicant reported)
- Dollar value of loans displayed in real dollars using annual average of [Northeast Urban CPI](#) to adjust for inflation
- Weighted infrastructure age is a calculation of the aggregate age of infrastructure (using time elapsed from loan closing to present as age) and the weight was determined by the real dollar amount of the loan
- Loans issued after 2018 include more detailed project information but continues to be self-reported

Project descriptions based on the Bond Bank's historic applicant reported records and were not independently verified. Please submit requests for changes to bond-bank@vtbondagency.org

Annotated Dashboard

Weighted infrastructure by type and comparison to statewide averages within Bond Bank portfolio
